Thinking Different - Living Different

*"We cannot solve our problems with the same thinking we used when we created the problem."
Albert Einstein*

How are we thinking different?

First is Electricity for our homes - ALL homes in every community.

From here, we gain control of power for our daily lives, financial control, and freed from outside forces on our homes and families.

What exactly are we talking about?

Storing electricity in our homes and businesses.

Storing Electricity in Batteries specifically.

Being Practical;

- We have all stored electricity in batteries and use them daily in small applications
- We have all used rechargeable batteries - daily in our phones and laptops
- We have all been in portable electric charging and storage devices - Automobiles
- Most have seen or used a 'UPS' for a computer at home or work (Backup)
- We all have had power outages from a few minutes to days - some months

We asked the questions;

Is there technology at an affordable cost to run every home off batteries?

Is it safe enough to be put inside an apartment or condo?

Is it scalable to run a business, entire building, or church?

If the battery technology changes, can we transition to new technology?

Can this be practical for EVERY home?

After 2 months of research and visits, the answers were ALL YES!!!

Now what?

What do we do with this information?

First - our home in Puerto Rico

IF, we can make it work here, we can do it anywhere.

Success in our home means success in ANY home in Puerto Rico and the States.

What did we do?

We thought like a Laptop...

A laptop has a battery, runs off a battery, and does not care where the electricity comes from to charge itself.

You can use a solar panel, car (cigarette lighter outlet), wall outlet, or a windmill.

Just supply electricity and it will charge and be available to use when you want/need.

Simple model.

The REAL Thinking Different here over ALL other Energy Companies and Solar Installers is this - Energy Storage for when we WANT or NEED Electricity.

If you really think about it, our homes typically consume electricity 24/7 for our refrigerators.

Beyond that, Coffee, Stove, Lights, Air Conditioning, and TV/Computers are part of our daily lives, and, we use when we are home and want. Not a constant uses of Electricity.

So, if we could supply a home or business with constant supply of Electricity AND store enough to last a few days, we could be independent of the Electricity we pay each month!

Not to mention we would NOT have rising Electricity cost that are essentially paying for poor service and only getting worse!

Here is where we start, and, where we choose a path to independence.

Also, here is where we choose paths - Technical (I want to know Details) or Practical (What does my Home need and How Much?)

Connect with us and we can start this journey to energy independence at affordable prices.
